

The battery powered projection screen is the perfect solution for freedom of installation. This screen does not have an electrical cable like a traditional motorised screen, but has an integrated rechargeable battery that ensures wireless, autonomous and reliable operation over time. This screen is ideal for individuals and professionals who are looking for a solution that is easy to install in protected areas or without an electrical outlet. **It is 4K compatible.**

### Fabric

This screen features matte white PVC fabric (1 gain) with blackout backing, an adjustable blackdrop to adapt to all your configurations, and a black border so you can enjoy the best possible contrast and image rendering. With a thickness of 0.42mm, the screen offers a viewing angle of 160°.

### Control solutions

To operate your screen, you have a radio frequency (RF) remote control to easily adjust the level of the image to where you want it.

### Battery

Your wireless projection screen works with a built-in rechargeable battery. This solution is ideal even for rooms without power outlets. 1 battery charge guarantees 200 up and downs.

### Adjustment of the stops

For optimal user comfort, you can easily set and memorise the stop points for the motor. When you press the down button on your remote control, the screen stops automatically at the level set.

### Tubular motor

The motor is completely invisible, quieter and more reliable than a synchronised motor. Delivered with charging kit and multi-country adapters (cable length 4m).

### Casing

This versatile and functional screen is distinguished by its design and ease of installation with an ultra-slim casing, which can be fixed to the wall or ceiling by its ends, depending on the layout of your room.

### Optional

**040-1001** White mounting brackets
